```
This is the protein sequence of a mutated extracellular domain of the p55 tumour necrosis factor receptor (TNFrED) in which a Pro residue substitutes the native His-34 residue (residue 3 in the present sequence) and an Ile residue substitutes the native Ser-57 residue (residue 46 of the present sequence). Screening of TNFrED mutant clones using a yeast display system yielded a clone that showed a higher
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Tumour necrosis factor; receptor; TNFrED; proline; protein engineering; mutant; mutein.

expression level in yeast than did a wild-type TNFrED clone. The encoded polypeptide contained these 2 amino acid substitutions. The introduction of proline residues may assist the polypeptide to adopt a favourable conformation that fixes the neighbouring cysteine residue into the correct orientation for disulfide bond formation, resulting in a higher yield of correctly folded proteins in yeast or mammalian host cells. The invention therefore provides methods of increasing protein expression substituting an amino acid residue with proline, where the withins 3 maino acids of a cysteine residue. Note: The present sequence is not shown in the specification but is derived from the TNFrED sequence given in figure 4 (see ABR62363)

This invention relates to an isolated nucleic acid molecule encoding a human tumour necrosis factor(TNF)-receptor related protein TR2. Included in the hiroenthon are the two splice variants of TR2. FR2-SV1 and TR2-SV2.

The TR2 gene is located on chromosome 1 at position p36.2-p36.3. TR2 is a member of the TNFR superfamily. The invention includes a method for the tragment of arthritis or inflammation using an antibody directed against a fragment of arthritis or inflammation; antianaemic, antianaemic, antialeragis, antianthritic, antiashmatic, and antibodies exhibit cytostatic, dermatological, antianaemic, antibodies exhibit cytostatic, antianaemic, antianatory, neuroprotective, nnotropic, antiashmatic, and cardiac tumours, pancreatic, breast, or prostate cancer), and immunodeficiency or for enhancing an in vivo leukocyte response to an immunodeficiency or for enhancing an in vivo leukocyte response to an immunodeficiency or for enhancing an in vivo leukocyte response to an entigen. Anti-TR2 antibodies are useful for treating, inhibiting or preventing autoimmune diseases (such as autoimmune haemolytic anaemia, dermatitis, allergic encephalomyelitis, rheumatoid arthritis, asthma, and confined immunodeficiency (SCID) * Iniked, B cell lymphoproliferative or razagonists are useful for treating or preventing autoimmune diseases and folympetides, agonists sor antagonists are useful for treating or preventing autoimmune diseases and subibit the growth, progression and/or metastasis of cancers. They are inhibit the growth, progression and/or metastasis of cancers. They are subscuined for treating or preventing autoimmune diseases and survival, or the inhibition of apoptosis, e.g. Alzheimer's disease or treating are useful for generating antibodies are useful sease. The TR2 polypapedies are useful for generating antibodies and polypeptides and general paraeral p

as sources for generating antibodies, as molecular weight markers. This sequence represents the tumour necrosis factor receptor (TNFR) domain of the human TNFR-1 protein. The sequence was used in the characterisation of the TR2 receptor protein of the invention

19-DEC-2002.

Nucleic acid molecule encoding a human tumor necrosis factor receptor 2 and its two splice variants, useful for treating arthritis or inflammation, cancer (such as follicular lymphomas) and immunodeficiency

disorders.

m

```
protein comprising a protein whose sequence comprises an immunogenic fragment of the amino acid residues 68-240 of the Human apoptosis inducing molecule II, AIM II, appearing as ADL17690 or a protein whose sequence comprises at least 30 or 50 amino acid residues 68-240, where the fragment comprises at least 30 or 50 amino acid residues 68-240, where the fragment comprises at least 30 or 50 amino acid residues. Also included are a hybridoma that produces the antibody, a method of detecting in a biological sample a protein that binds the antibody or its portion, a composition comprising the antibody and a carrier and an isolated cell that produces the antibody. Human AIM II is a member of the tumour necrosis ligand superfamily and has been shown to bind lymphotoxin-beta receptor and TR6 (TRAIL receptor 6). The antibody is useful for preparing a composition for treating e.g., lymphadenopathy, aberrant bone development, autoimmune disease, graft-versus-host disease, rheumatoid arthritis, osteoarthritis or cancer (many other disease, and conditions are listed in the specification). The present sequence represents a cysteine-rich motif from a protein thought to bind AIM II.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               protein, useful for preparing a composition for treating e.g.,
lymphadenopathy, autoimmune disease, rheumatoid arthritis, osteoarthritis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to the isolation of a biologically active Apo-2 ligand inhibitor (Apo-2LI) or Apo-3, and the polymucleotide sequences encoding them. Apo-2LI and Apo-3 are involved in apoptosis. The Apo-2LI and Apo-3 polypeptides are useful in diagnostic assays. Apo-2LI is useful for generating antibodies, as standards in assays for Apo-2LI in affairty purification techniques, and in competitive-type receptor binding assays when labelled with radioiodine, enzymes or fluorophores. Agonistic Apo-3 antibodies are useful for stimulating or inducing apoptosis in cancer cells, and thus have therapeutic utility. The present sequence represents the extracellular region of a human TNF receptor family protein. This sequence is compared with the extracellular region of human Apo-2LI.
                                                                                                                                                                                                                                                                                                                                        Novel isolated biologically active Apo-2 ligand inhibitor polypeptide, or Apo-3 polypeptide which induces or stimulates apoptotic activity, useful in diagnostic assays.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           68 GQVEISSCTVDRDTVCGCRKNQYRHYWSENLFQC----FNCSLCLN-GTVH----LSCQ 117

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           7;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to apoptosis inducing molecule II (AIM III), a TNF (tumour necrosis factor)-ligand superfamily member and its corresponding nucleic acid sequence. The invention is useful for preventing, treating, ameliorating, diagnosing or prognosing graft versus host disease, immunodeficiency, cancer, autoimmune diseases such as multiple sclerosis, type I diabetes, rheumatoid arthritis, primary biliary cirrhosis, aplastic ansemia, myelodysplasia, systemic lupus erythematosus and idiopathic thrombocytopenic purpura. It is useful for screening or identifying compounds capable of enhancing or inhibiting cellular response induced by AIM II, for inhibiting, blocking or reducing T-cell activation. AIM II is useful as a molecular weight marker on SDS-PAGE gels or on gel filtration columns. The present sequence is a cysteinerich motif of human TNF receptor (TNFR) family member.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              GQVEISSCTVDRDTVCGCRKNQYRHYWSENLFQC-----FNCSLCLN-GTVH----LSCQ 117

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention describes novel polynucleotide sequences encoding tumour necrosis factor (TNF) receptor (TNF-R) or TNF binding protein (TNF-BP). The products of the invention are useful in pharmaceutical compositions for prophylaxis or treatment of human tumours and to understand the mechanisms of TNF action. This sequence represents a fragment of the TNF-BP described in the disclosure of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       11 HPQNNSICCTKCHKGTYLYNDCPGPGQDTDCRECESGSFTASENHIR-HCLSCSKCRKEM 69

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The sequence shows a native 30 kD TNF inhibitor which may be modified to contain at least one non-native cysteine residue, pref. at positions 1, 14, 105, 111 and/or 165. The non-native cysteine is joined to a non-peptidic polymer, pref. monomethoxy PEG via thio-ether bonds. Two such TNF inhibitor mols may be linked via this non-peptidic spacer. The modified polypeptides show improved pharmokinetic properties, i.e. increased mol. w. hence reduced clearance rate following s.c. or systemic administration, increased sol. of native TNF inhibitors, and reduced antigenicity. The polypeptides may be used for treatment of TNF mediated diseases such as adult respiratory distress syndrome, pulmonary fibrosis, rheumatoid arthritis, inflammatory bowel disease and septic shock. The same method may be applied to the interleukin-1 receptor antigonist IL-1ra. See also AAR27495. (Updated on 25-MAR-2003 to correct

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence is the human soluble tumour necrosis factor receptor (STNFR). The protein was used to make the truncated sTNFR proteins of the invention. The truncated sTNFR proteins and tumour necrosis factor binding proteins (TNBP) are used to treat any TNF-mediated disease, e.g. arthritis, adult respiratory distress syndrome, cachexia/anorexia, cancer, chronic fatigue syndrome, graft rejection, Alrahemer's diseases and other autoimmune diseases. Cells transformed with a vector containing blw encoding the protein may be used for production of recombinant sTNFR, which may also be used for measuring the amount of sTNFR; in samples and to raise antibodies against sTNFR. TNPR may also be used in preparation of therapeutic compositions for treating the above diseases. The sTNFR deamidation site in region 111-126, so are more stable in vivo); contain fewer disulphide bonds and fewer epitopes, making them less antigenic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          GQVEISSCTVDRDTVCGCRKNQYRHYWSENLFQC----FNCSLCLN-GTVH----LSCQ 119

The present invention describes a chimeric polypeptide (A1), comprising an osteoprocegerin (OPG) dimerisation domain fused to a heterologous amino acid sequence. Also described are: (1) a multimer polypeptide comprising covalently associated A1 monomers; (2) an isolated nucleic acid encoding A1; (3) an expression vector comprising the nucleic acid sequence; and (4) a host cell transformed or transfected with the expression vector so that the nucleic acid is expressible. The products from the present invention are useful to treat a variety of disorders including those related to receptor binding. Compositions comprising tumour necrosis factor (TNF)/OPG and TNF receptor (TNFR)/OPG chimeras are used to treat TNF and TNFR—mediated disorders such as inflammation, used to treat TNF and TNFR—mediated disorders such as inflammation, autoimmune diseases and disorders related to excessive apoptosis. The chimeras are also useful for detecting molecules which interact with the fused heterologous sequences to identify potential new receptors and ligands. The present sequence represents the TNF inhibitor 30 kDa protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                70 GOVEISSCTVDRDTVCGCRKNOYRHYWSENLFOC----FNCSLCLN-GTVH----LSCO 119

```
The present sequence is the protein sequence of the extracellular domain of the p55 tumour necrosis factor receptor (TMPRED). Screening of TNEED mutant clones using a yeast display system yielded 2 mutant clones (see AR862364 and ABR62365) that showed higher expression levels in yeast than in wild-type TNFrED. The first clone contained a proline residue that substituted the native Ser-87 residue (Dosition 76 of the present sequence). The other clone contain a proline residue that substituted the native His-34 residue (13 of the present sequence) and also an isoleucine native His-34 residue (23 of the present sequence) and also an isoleucine sequence) of TNFrED. The invention provides methods of increasing protein sequence) of TNFrED. The invention provides methods of increasing protein captured the substituting an amino acid residue with proline, where the substitution occurs within 10, and captorial sessions may assist the polypeptide to adopt a favourable conformation that fixes the neighbouring cysteine residue into the correct orientation for disulfide bond formation, resulting in a higher yield of correctly folded proteins in yeast or mammalian host cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        GQVEISSCTVDRDTVCGCRKNQYRHYWSENLFQC----FNCSLCLN-GTVH----LSCQ 119
                                                                                                                                                                                                                                                                                                                                                                                                     Increasing expression of a protein, comprises substituting at least one codon in the polynucleotide encoding the protein, for a codon encoding proline.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     11 HPQNNSICCTKCHKGTYLYNDCPGPGQDTDCRECESGSFTASENHLR-HCLSCSKCRKEM

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to Tumour Necrosis Factor (TNF) inhibitors (see AAB37676 and AAB37685), which have TNF inhibitory activity. The novel TNF inhibitors of the present invention are useful as therapeutic agents for inhibiting the activity of TNF and interleukin (IL-1), and for treating inflammatory and degenerative diseases mediated by TNF. The 30 kba TNF inhibitor can inhibit TNF alpha
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel 30 kDa tumor necrosis factor inhibitor analog comprising a non-native cysteine residue cross-linked with polyethylene glycol, useful for treating inflammatory and degenerative diseases mediated by TNF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  76 SQVALENCSAVADTRCGCKPGWFVEC---QVSQCVSSSPFYCQPCLDCGALHRHTRLLCS 132

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 à
                                                                                                                                                                                                                                                                                                                                                                                                                                                   7;
                                                                                                                                                                                                                                                                                    The present invention relates to the isolation of novel human tumour necrosis factor (TNF) inhibitor polypeptides (designated 30kDa TNF inhibitor and 40kDa TNF inhibitor), and the polymucleotide sequences encoding them. Also disclosed is a fragment of the 30kDa TNF inhibitor polypeptide which comprises at least one non-native cysteine residue at the N-terminus, C-terminus, residue 14 or preferably 105. The polymucleotide sequence encoding the 30kDa TNF inhibitor is useful for manufacturing a medicament for treating a pathological condition mediated by TNF. The present sequence represents human 30kDa TNF inhibitor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SQVALENCSAVADTRCGCKPGWFVEC -- QVSQCVSSSPFYCQPCLDCGALHRHTRLLCS 132

Also disclosed is a fragment of the 30kba TNF inhibitor polypeptide which comprises at least one non-native cysteine residue at the N-terminus, C-terminus, residue 14 or preferably 105. The polynucleotide sequence encoding the 30kba TNF inhibitor manufacturing a medicament for treating a pathological condition mediated by TNF. The present sequence represents human 30kba TNF inhibitor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           76 SQVALENCSAVADTRCGCKPGWFVEC---QVSQCVSSSPFYCQPCLDCGALHRHTRLLCS 132
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             70 GOVEISSCTVDRDTVCGCRKNOYRHYWSENLFOC----FNCSLCLN-GTVH----LSCQ 119
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New nucleic acid comprising a sequence that encodes a polypeptide having TNF inhibitory activity, useful for manufacturing a medicament for treating a pathological condition mediated by TNF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    11 HPQNNSICCTKCHKGTYLYNDCPGPGQDTDCRECESGSFTASENHLR-HCLSCSKCRKEM 69

Determining T-cell epitope of a protein (e.g. cytokine or cytokine receptor), useful for reducing protein allergenicity, comprises combining differentiated dendritic cells and naive T-cells with a peptide having The invention relates to a novel method for determining a T-cell epitope of a protein, where the protein is selected from cytokines and cytokine receptors. The method comprises combining a solution of differentiated dendritic cells and naive CD4+ and/or CD8+ T-cells with a pepset of peptides comprising the T-cell epitope. The composition and methods are useful in reducing the immunogenicity of cytokines and cytokine receptors such as interferon-beta, soluble tumour necrosis factor receptor-1, erythropoietin or thrombopoietin. These modified cytokines and cytokine receptors may be used for treating various conditions such as inflammation, cancer or anaemia. This sequence represents the human tumour necrosis factor receptor 1 (TNF-R1) protein of the invention. Claim 4; SEQ ID NO 106; 51pp; English. the T-cell epitope.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 16,

Sequence 4, Application US/09146950A
Patent No. 6287808
GENERAL INFORMATION:
APPLICANT: BUSIGLA, SAMANTHA J.
TITLE OF INVENTION: NOVEL MOLECULES OF THE HERPESVIRUS-ENTRY-MEDIATOR-RELATED
TITLE OF INVENTION: PROTEIN FAMILY AND USES THEREOF
FILE REFERENCE: 09404,057001
CURRENT APPLICATION NUMBER: US/09/146,950A
CURRENT FILING DATE: 1988-09-03
NUMBER OF SEQ ID NOS: 25
SOFTWARE: FastSEQ for Windows Version 3.0
SEQ ID NO 4.
TENGENT 15.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       69 QACDEQASQVALENCSAVADTRCGCKPGWFVECQVSQCVSSSPFYCQPCLDCGALHRHTR 128

N;Alternate names: repressor protein F
C;Species: Bacherichia coli
Species: Bacherichia coli
C;Species: Bacherichia coli
C;Date: plasmid RSF1010 is a broad-host-range plasmid belonging to incompatibility group
C;Date: 31-Dec-1991 #sequence_revision 31-Dec-1991 #text_change 09-Jul-2004
C;Accession: JH0129; PS0292

Pypothetical protein Rv2132 - Mycobacterium tuberculosis (strain H37RV)

CjSpecies: Mycobacterium tuberculosis

CjSpecies: Mycobacterium tuberculosis

CjAccession: H70576

RjCole, S.T.; Brosch, R.; Parkhill, J.; Garnier, T.; Churcher, C.; Harris, D.; Gordon, S.; Connor, R.; Davies, R.; Devlin, K.; Feltwell, T.; Gentles, S.; Hamlin, N.; Holroyd, S.; Rajandream, M.A.; Rogers, J.; Rutter, S.; Seeger, K.; Skelton, S.; Squares, S.
Nature 393, 537-544, 1998

A;Authors: Sqares, R.; Sulston, J.E.; Taylor, K.; Whitehead, S.; Barrell, B.G.

Submitted (SEP-2003) to the EMBL/GenBank/DDBJ databases.

- FUNCTION: Signam factors are initiation factors that promote the attachment of RNA polymerses to specific initiation sites and are then released (By similarity).

- Initiation sites and are then released (By similarity).

- SIMILARITY: Bealongs to the sigma-70 factor family.
